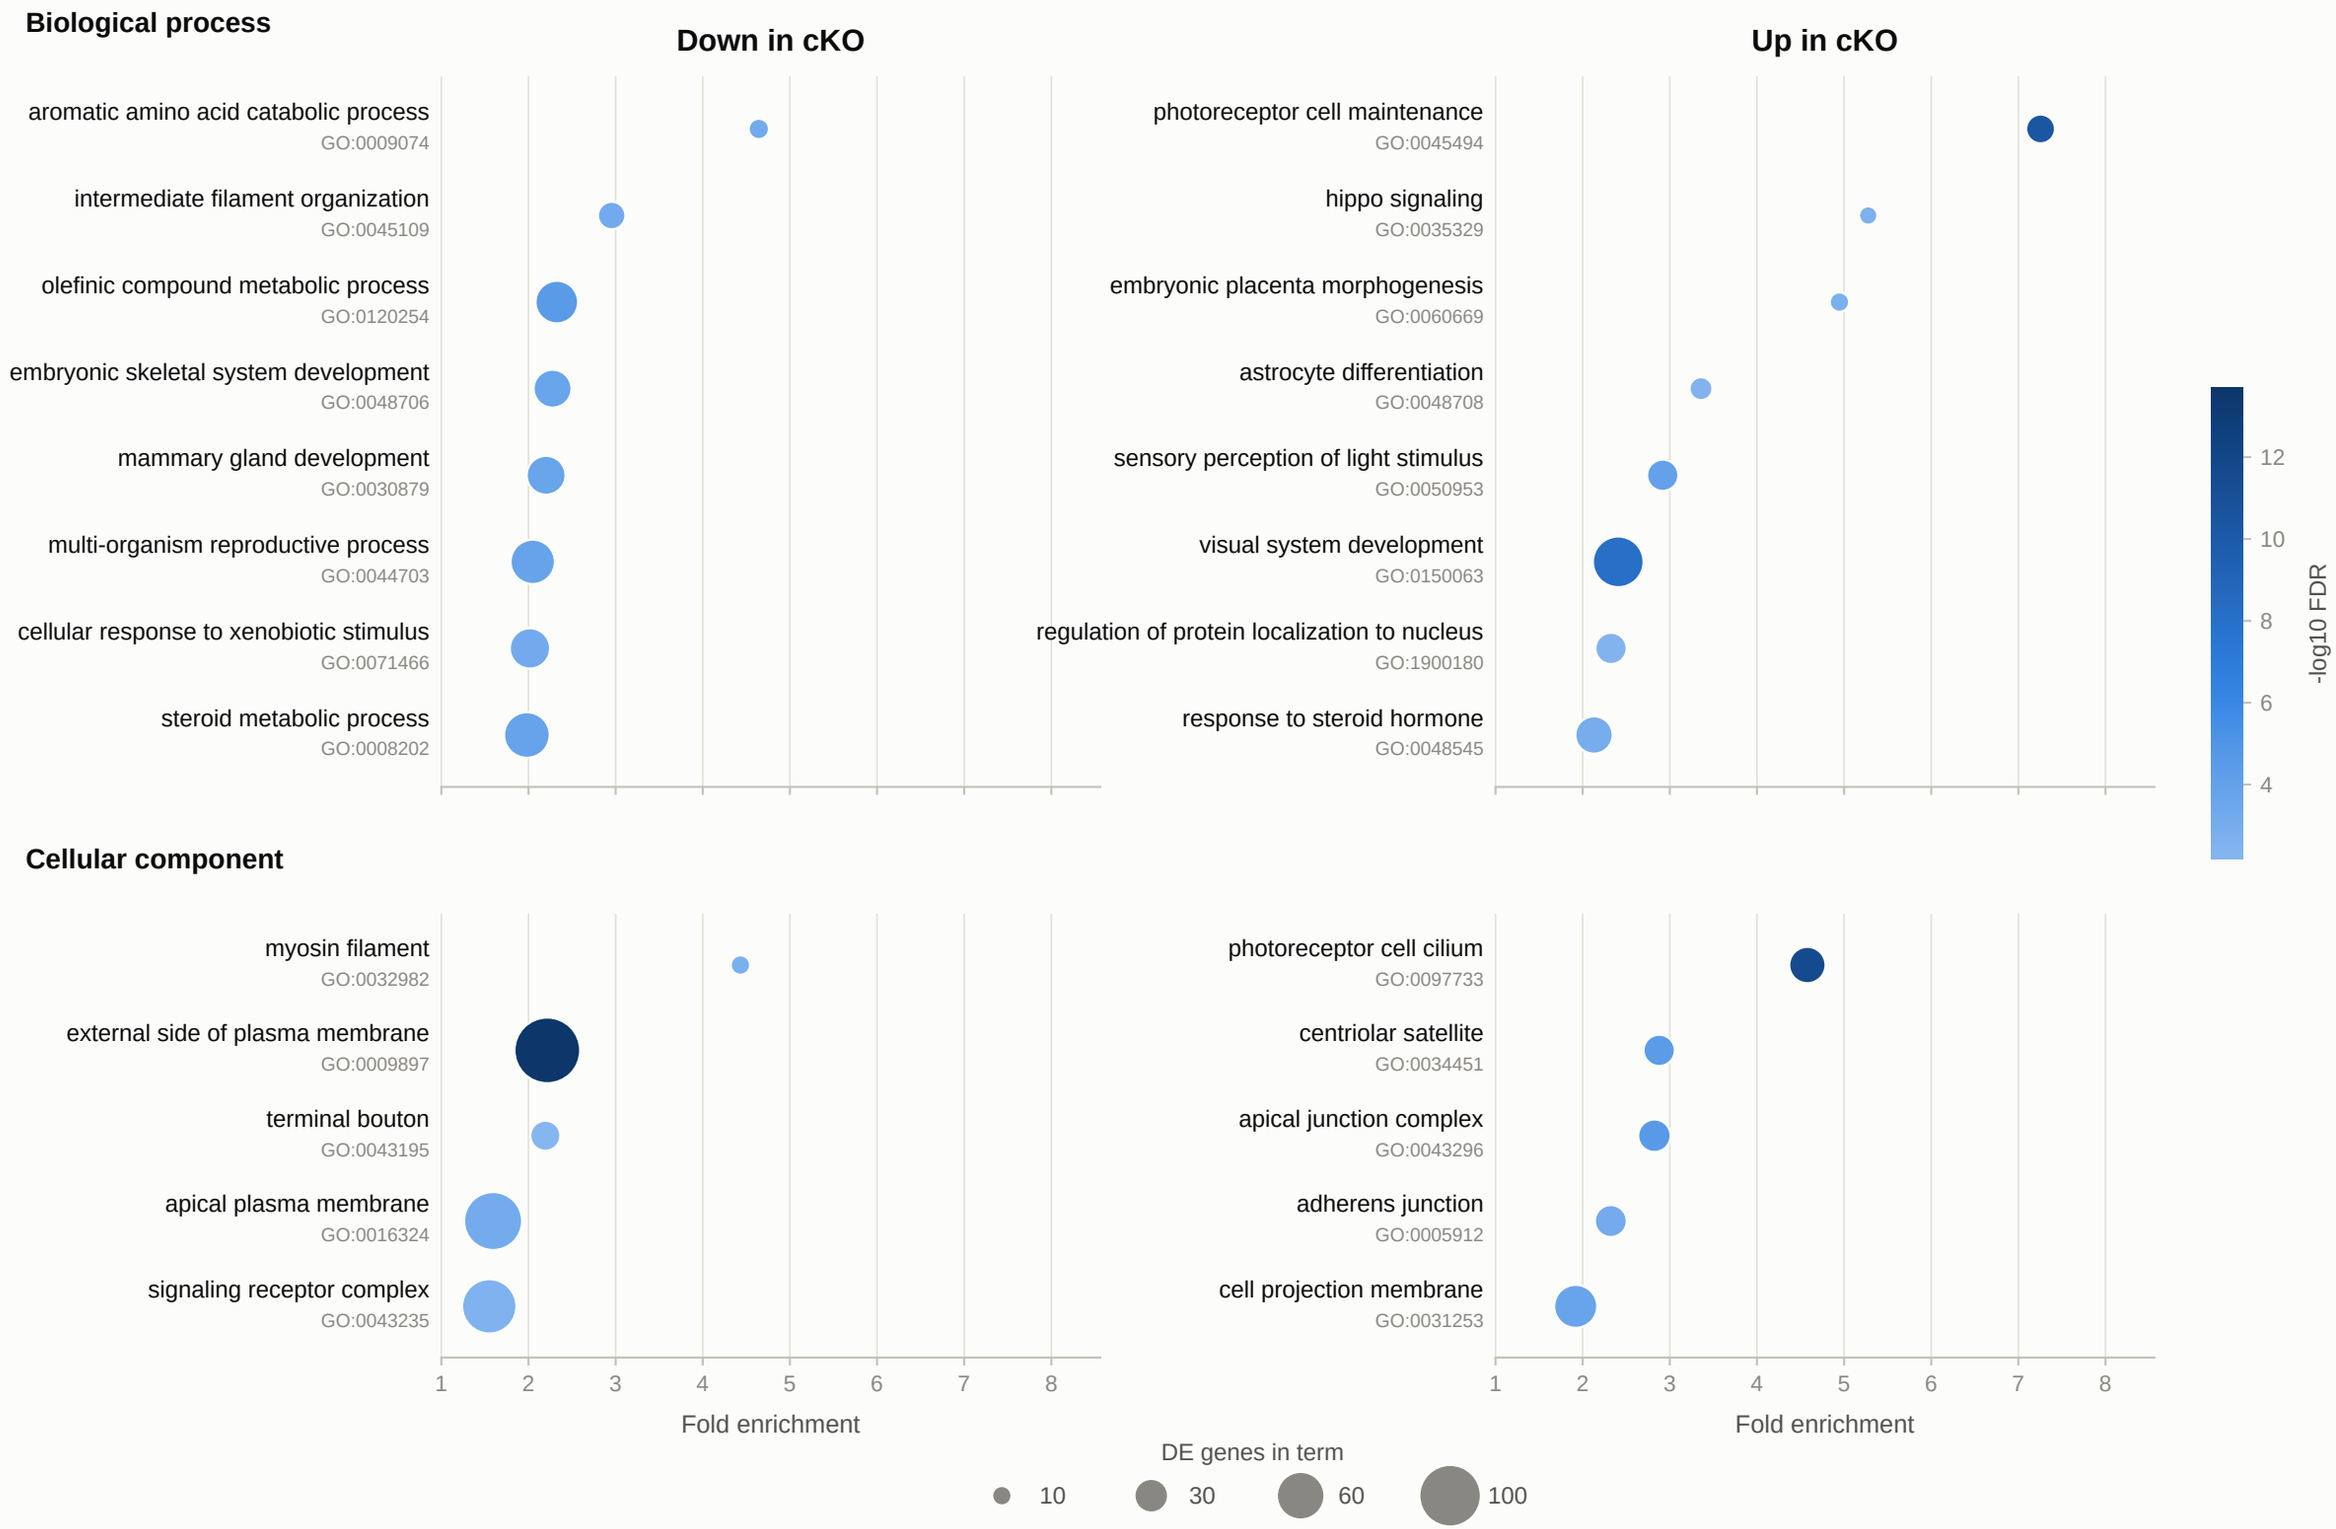
GO enrichment in the 1-month Ddx41 conditional-knockout retina


CHX10-Cre; Ddx41 fl/fl vs. littermate control, n = 3 per genotype. Over-representation among DESeq2 padj < 0.05 genes, against the 17,444 tested GO-annotated genes.
Terms pass FDR < 0.05 in both a hypergeometric and an expression-matched permutation test, are de-duplicated by gene overlap, and are the top 8 (BP) and 5 (CC) per direction.
