GO enrichment in the 1-month CHX10-Cre; Ddx41$^{fl/fl}$ retina

Over-representation among genes differentially expressed vs. littermate control (DESeq2 padj < 0.05; n = 3 per genotype).
Terms shown pass FDR < 0.05 in both a hypergeometric test against all 17,444 tested GO-annotated genes and an expression-matched permutation test, and are de-duplicated by gene overlap; top 8 per ontology per direction.
